**DOVER, DE**---Delaware Technical & Community College students recently presented architectural plans for an oncology camp to the co-founders of the Kaylyn Elaine Warren Foundation. The foundation was established to fulfill the dream of Kaylyn, who was diagnosed with Acute Lymphoblastic Leukemia and died at the age of seventeen.

"My daughter Kaylyn's last wish was to create a camp for children suffering from all types of childhood cancers," said Laurie Warren, President and Co-founder of the foundation. "With the hard work and effort of these students, we are closer than ever to making her dream, 'Kay's Kamp,' a reality."

The design was the combined effort of several classes including Interior Design, Engineering, and Architectural classes. "This is an amazing opportunity for the different classes to collaborate," said Dr. Lester Link, Engineering Technology Department Chair. "This interactive project among our students gives them real world experience working as a team with other disciplines."

"This project is not just a case study," said Architectural Instructor R.J. Chandler Sr. "The design the students have created will be brought to life once the foundation secures the land and capital they need. Being part of the first oncology camp in Delaware is a very rewarding opportunity."

Delaware Tech Terry Campus offers a wide variety of relevant, high-quality programs in a friendly and nurturing environment. Innovative instruction is provided in a convenient and affordable setting to meet the varied educational needs of motivated, focused, career-oriented people seeking pathways for success.
